

HNC in Electrical and Electronic Engineering for England (HTQ)

| | |
|-------------|----------------------------|
| Location | Stretford Campus |
| Course Type | University Level |
| Department | Engineering |
| Start Date | Monday 16th September 2024 |
| Duration | Part-time, 35 Weeks |
| Time | 09:00 - 17:00 |
| Fee | £ 3600.00 |
| Course Code | TPP-HM4H-1300 |

Course Overview

The aim of this course is to provide students with a broader knowledge of engineering principles and methodology, combined with the development of research and analytical skills, in order to prepare you for employment opportunities in the Electrical and Electronic Engineering field. There will be a focus on reflection, critical thinking, environmental impact, analysis and personal development.

Our dedicated faculty, comprised of experienced professionals, will guide you through the latest industry trends, technological advancements, and sustainable practices. You will also develop essential skills in problem-solving, project management, and teamwork, all of which are highly valued by employers in the field.

Upon successful completion of the HNC program, you will have the option to progress to an HND or enter the workforce with the confidence and competence to contribute effectively to the electrical and electronic engineering industry.

Course Requirements

All applications will be considered on individual merit. However, offers will usually be based on:

1 BTEC Level 3 qualification in Engineering

2 GCE Advanced Level profile that demonstrates strong performance in a relevant subject or adequate performance in more than one GCE subject.

3 GCSE grades at A* to C (or equivalent) and/or 9 to 4 (or equivalent) in subjects such as Mathematics and English

4 Other related Level 3 qualifications

5 Access to Higher Education Diploma from an approved further education institution

6 Relevant work experience, or an international equivalent to the above qualifications

What You Will Learn

The units lay the foundation of learning by giving students a wide introduction to the engineering sector, with a focused introduction to electrical and electronic engineering. This strengthens and builds core skills while preparing students for more specialist subjects at Level 5 or to enter employment with the necessary skills for job which entail some personal responsibility.

Students will gain broader range of engineering and scientific knowledge linked to practical skills developed through research, directed study, independent study, and workplace scenarios. Students are involved in vocational activities that help them to develop behaviours and transferable skills which include communication, research, teamwork, and analysis, which are held in high regard in higher education and in the workplace.

By the end of Level 4 study, students will have sound knowledge of the basic concepts of electrical and electronic engineering. They will be confident in a range of subject specific skills as well as in general skills and qualities that are key to these important areas of engineering.

Assessment

Coursework and Assignments: Coursework and assignments are common assessment tools. Students are given specific projects or tasks related to their coursework, and they are evaluated on their ability to apply theoretical knowledge to practical problems.

Practical Work: Practical laboratory sessions are a crucial part of an electrical engineering program. Students may be assessed on their ability to conduct experiments, analyse data, and draw conclusions from their findings.

Reports and Technical Writing: Students may be required to write technical reports based on their laboratory work or projects. These reports assess their ability to communicate technical information effectively.

Presentations: Students may be asked to give presentations on engineering topics, projects, or case studies. This assesses their communication and presentation skills, as well as their understanding of the subject matter.

Extensive use is made of computer modelling and simulation techniques and an emphasis is put on practical applications throughout.

Progression

On successful completion you may progress to a HND at Level 5 and then to a top-up Level 6 on a related undergraduate programme such as:

BEng Tech (Hons)

BSc (Hons) Electrical and Electronic Engineering (Top-up)

Career Options

A Higher National Certificate (HNC) in Electrical and Electronic Engineering opens a wide array of rewarding career options in various sectors. Graduates of this program are equipped with a strong foundation in mechanical engineering principles and practical skills, making them valuable assets to industries that rely on innovation, design, and problem-solving. Here are some promising career paths:

CAD technician

Design Engineer

Electrical Engineer

Electronics Engineer

Sound/Broadcast Engineer

Network Engineer

Mandatory Units

At Level 4 you will study the following units:

Engineering Design
Engineering Maths
Managing a Professional Engineering Project
Production Engineering for Manufacture
Automation, Robotics and Programmable Logic Controllers
Quality and Process Improvement
Electrical and Electronic Principles
Electrical Machines

Extra Costs Involved

No

Exam Validation Body

Pearson Education Ltd

Exam Validation Body

Pearson Education Ltd

Hours Per Week

6 hours for part-time course or 12 hours for full-time course.

How Long To Complete

Two years part-time with one full day attendance per week, or one year full-time with the equivalent of two full day attendance per week.

Programme Structure

Each unit comprises 15 credits and over the course of the programme you will gain 120 credits.
